EDUCATION

University at Buffalo

Bachelor of Science in Computer Science

Aug 2023 - Present

Buffalo, New York

- Concentration in Artificial Intelligence
- Coursework: Data Structures, Algorithms, Systems Programming, Computer Vision, Data Intensive Computing, Machine Learning, Reinforcement Learning, Software Engineering

EXPERIENCE

Forward Deployed Engineer Intern

May 2026 - Present

Koi AgeTech Ventures

Morristown, NJ

- Evaluated healthcare patient datasets containing 100,000+ records by comparing field coverage, missingness, variable distributions, longitudinal depth, and schema compatibility for backend data modeling
- Mapped patient-level variables from large-scale datasets, public sources, and PDFs into normalized schema requirements, aligning demographic, clinical, behavioral, medication, and longitudinal features for ingestion
- Integrated healthcare and drug-data APIs with AI governance and PDF-to-dataset agent workflows, supporting interaction-matrix construction, extraction confidence thresholds, audit fields, and patient-drug risk logic

AI Data Manager

May 2026 - Present

DigitCells

Buffalo Grove, IL

- Validated 2,500+ AI-generated gastrointestinal biopsy outputs against structured pathology reports, improving consistency across patient case identifiers, anatomical locations, and diagnostic records
- Performed verification across 25,000+ structured clinical data fields within spreadsheet-based workflows while maintaining 99%+ review accuracy during pathology dataset validation
- Identified and resolved 500+ inconsistencies across AI prediction outputs and pathology metadata, strengthening data integrity within HIPAA-conscious validation workflows

Machine Learning and Bioinformatics Researcher

May 2026 - Present

University at Buffalo; Advisor: Dr. Ram Samudrala, Dr. Nalina Ratha

Buffalo, NY

- Synthesized computational predictions with disease biology to identify therapeutic candidates that may target muscle protein synthesis, muscle catabolism, inflammation, and lean body mass preservation
- Used DiffDock to perform molecular docking on top-ranked candidates, evaluating predicted binding poses and structural plausibility for relevant protein targets
- Investigated frequency-domain machine learning approaches using FFT-based feature extraction and spectral representations to identify opportunities for improving model robustness, generalization, and cross-domain pattern recognition

Software Engineer

January 2025 - March 2026

Body Alliance Physical Therapy P.C.

Brooklyn, NY

- Built an AI medical observer that analyzes patient movement patterns during physical therapy sessions, providing real-time feedback to therapists and patients which improved patient outcomes by 15% and increased patient engagement by 20%.

PROJECTS

Deepfake Detector | Python, PyTorch, OpenCV, scikitlearns, Docker, Matplotlib, Flask

- Deployed as a full-stack web app with React and Flask that was featured in Handshake's Learn Hub and achieved 98% ROC-AUC 300,000+ image datasets using a two-branch fusion model (DoRA-tuned CLIP ViT-L/14 + FFT CNN),improving cross-generator generalization

NYPD Optimized Scheduling | Python, Pandas, PySpark, scikit-learn, Matplotlib, NumPy

- Developed a clustering algorithm using K-Means to group similar crime incidents and implemented LightGBM to predict crime hotspots by precinct and time of day, achieving an accuracy of 0.908 on the test set.

Campus Clearout | React, PHP, MySQL, Figma, Scrum

- Created a student marketplace web application in collaboration with a team of 4 students through Scrum, organizing development sprints and facilitating communication between team members

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C/C++, L^AT_EX

Frameworks: Pytorch, scikit-learn, NumPy, Pandas, OpenCV, Hadoop, PySpark

Full Stack Development: React, Node.js, Flask, PHP, MySQL, Figma, Scrum

Developer Tools: Docker, SQL, Anaconda, Linux (Ubuntu), Jupyter

Bioinformatics and Statistical Tools: CANDO, DiffDock, AutoDock, PyMOL, UniProt, PubChem
